

## Butterfly Favorites

Butterflies are attracted to your garden by scents and smells. Certain plants give off the scent that tells the butterfly that this plant will have the nectar that will feed them. Often the plants are host plants for the caterpillars. The Butterflies sometimes pollinate the plants they visit so it is a mutually beneficial arrangement. Add a shallow dish of water and some places for the butterflies to hide and rest and you will have plenty of these beautiful summer visitors to your yard and garden.

### ANNUALS

<u>Latin Name</u>	<u>Common Name</u>
