## **CUCUMBERS 2023**

|   |           | COCOMBERS 2023  |                 |
|---|-----------|---|-----------------|
|   |           | Cucumber note: save space in your garden by growing cucumbers vertically on             |                 |
|   |           | trellises or in cages. The fruit will be longer and straighter, undersides won't be     |                 |
|   |           | yellow, and the fruit will be less available to crawling pests such as slugs. 'Bush'    | Key: OP=open    |
|   |           | type cukes have short vines - grow up on short trellis or cage or let them hang         | pollinated      |
|   |           | down over the edges of a container.   | F1=F1 hybrid    |
|   | Days to   |   |                 |
| Name  | Maturity* | Description   | Type            |
| Armenian (Yard                                |           | Cucumber relative (Cucumis melo. var. flexuousus). Ribbed, spineless, burpless          | OP; slicer;     |
| Long)   | 60 days   | fruits. Pick at 12-15 in. for best flavor. Fruit sets well at high temperatures.        | monoecious.     |
| <u>,                                     </u> |           | Early, sweet, burpless, and prolific, Beit Alpha produces well in both hot and cool     |                 |
|   |           | weather. Disease resistant plants have vigorous 6 ft. vines, strong thick stems;        |                 |
|   |           | the fruit can grow to 10-12 in. but is best picked at 6-8 in. Crunchy, nearly           |                 |
|   |           | seedless fruits have smooth, tender, dark green skin with shallow furrows and           |                 |
|   |           | don't need to be peeled. Plentiful foliage shades the soil and the baby cukes.          | OP, slicer,     |
|   |           | Great for fresh eating and for pickling. Developed at, and named for, the Beit          | pickler,        |
| Beit Alpha                                    | 55 days   | Alpha Kibbutz, in 1936.   | parthenocarpic  |
| Burpee Burpless                               | 60-66     | Smooth, dark green fruit, very thin-skinned and tasty. Pick at 8-10 in. for best        | F1; slicer;     |
| #26   | days      | flavor. Resistant to mosaic and mildew.   | monoecious.     |
|   |           | Deep green striped with white, straight, 6-8 in. fruits, crisp and delicious. Early     |                 |
|   |           | and high yielding; resistant to mosaic virus and downy mildew. A favorite since         | F1; slicer;     |
| Burpee Hybrid II                              | 55 days   | 1945.   | monoecious.     |
|   |           | Firm, <b>nearly seedless</b> , consistently straight and cylindrical cucumbers. Dark    |                 |
|   |           | green color, average 8-10 in. length. Resistant to disease. Compact, bushy plant        | F1; slicer;     |
| Burpless Bush                                 | 55 days   | with 2 ft. vines, good for small gardens and containers.                                | gynoecious.     |
|   |           | Dark green, smooth, 12 in., <b>nearly seedless</b> cucumbers, with a sweet, mild,       |                 |
|   |           | bitter-free flavor and thin skin. Great yields, heat tolerant, resistant to cucumber    | F1; slicer;     |
| Burpless Supreme                              | 55 days   | mosaic, powdery and downy mildew.   | monoecious.     |
|   |           | Bushy plants bear early, white-spined, 5-inch cukes; great for small gardens or         |                 |
|   |           | <b>containers</b> , plants measure only 3 feet in diameter at maturity. One of the best | F1; pickler;    |
| Bush Pickle                                   | 45 days   | cucumbers for dill pickles.   | monoecious.     |
|   |           | Vigorous, productive, disease resistant plants; abundant 6-8 in., burpless,             |                 |
|   |           | seedless cucumbers with thin, tender, forest green skin, crisp flesh, excellent         | F1; slicer;     |
|   |           | flavor. Especially delicious harvested small. 2002 AAS Winner. (Normally                | gynoecious,     |
| Diva  | 58 days   | seedless, a few seeds may grow if pollinated by other cucumber plants.)                 | parthenocarpic. |
|   |           | Developed especially for home gardeners. Fruit is solid and crisp, perfect for          |                 |
|   |           | pickles. Pick at 1.5 in. for tiny sweets or at 5-6 in. for dills. Vigorous plants with  |                 |
| Homemade                                      |           | excellent disease resistance, heavy yields, long season production. Makes               | OP; pickler;    |
| Pickles                                       | 55 days   | robust bite-sized pickles, slices, or large spears.                                     | monoecious.     |
|   |           | Heirloom introduced in 1894. Similar in appearance and size to a round lemon,           |                 |
|   |           | averages 3 in. by 2 in.; sweet flavored, ideal for salads, relishes, pickles. Pretty    |                 |
|   |           | when grown in large containers with support for the vines. Harvest when golf            | Heirloom; OP;   |
| Lemon   | 65 days   | ball size for best texture and flavor, when fruit is paler and not bright yellow.       | monoecious.     |
|   |           | 8-9 in., slender fruits stay uniformly dark green and mild tasting even under heat      | OP; slicer,     |
|   |           | stress. Excellent slicing cucumber and pickler. Multiple disease resistance,            | pickler;        |
| Marketmore 76                                 | 58 days   | vigorous and productive across a long picking season.                                   | monoecious.     |
|   | ·         | Sooyow type from northern China. Ribbed, 12 inch or longer fruit, with fine white       | F1; slicer,     |
|   |           | spines, very thin skin, doesn't need to be peeled. Great for pickling, slicing,         | pickler,        |
| Palace King                                   | 60 days   | sautéing. Tolerant of powdery mildew.   | monoecious.     |
|   |           |   |                 |

## **CUCUMBERS 2023**

| Heirloom from China. 15-18 in. long, ribbed, prickly (prickles easily rub off with gloved hand), deep green fruit, mild, sweet and crisp, burpless. Very productive plants, fruit can curl into fantastic shapes - a great climber. Grows well in hot weather and doesn't turn bitter. Resistant to powdery mildew.  Early variety; dark green, straight, 10-12 in. fruit, flavorful, mild, burpless, sweet, does not need peeling. Strong yields, long season. Disease resistant, vigorous vines.  AAS winner 1983. 12-14 in., slender, smooth, thin skinned, burpless, very sweet, seedless fruits. Productive plant resists disease, sets fruit without pollination; if other varieties are near, pollination may occur, in which case a few undeveloped seeds may be present.  Yigorous vines produce exceptional yields of 10-12 in., dark green fruit, crisp, burpless, sweet, with thin skins that require no peeling. Fruits mature very early. Highly disease resistant, semi-determinate plants.  Popular Japanese cucumber, 10 in. long, burpless, crisp and mild, dark green and smooth skinned with fine white spines. Heavy yields, good for slicing, pickler, monoecious Ridged English greenhouse type cucumbers that are burpless, mild flavored, dark green, thin and 10-18 in. long, nearly seedless. Grow well in greenhouse or outdoors, can climb 8 feet. Derived from the original 1897 English heirloom. 7" long, crisp, burpless cucumbers; skin is thin and tender, not bitter, and entire cucumber can be eaten without peeling. Excellent for slicing and pickling, best harvested at 3-7 in. long. High yields from plants that are tolerant to high soil moisture, cold soil, and resistant to downy mildew.  Feath of the vertical care of the seeds from a western slicier, pickler; monoecious for pickling or slicing. Excellent yields, even in high heat. Introduced by W. Atlee Burpee in 1893, who received the seeds from a western slicier, pickler.   |   |               | OCCUMPENTO 2020   |                                 |

## **CUCUMBERS 2023**

| Companions for Cucumbers | Corn: cucumbers are disliked by raccoons so it's good to plant them with corn, in exchange, corn protects cucumbers from wilt. Other companions: sunflowers, beets, radishes (deter cucumber beetles), carrots, cole crops, lettuce, onion, tomato, eggplant, dill (to attract beneficial insects), nasturtium. Cucumbers are said to dislike aromatic herbs (like rue, sage) and potatoes. |   |
|--------------------------|---|---|
| Gynoecious               | Has female flowers.   |   |
| Monoecious               | Has separate male and female flowers on the same plant.   |   |
| Parthenocarpic           | Sets fruit without pollination, so the fruit is seedless (unless pollinated by another variety, then there will be a few, undeveloped seeds).   | _ |
